FISH INSPECTION

—
Solution for
inspection and detection of
parasites in fish
—

ScanisakiS UVPress®

MAREXI, after many years developing innovation projects with the aim of implementing improvements in the processes associated with fishing and the commercialisation of seafood products, presents, under the commercial brand ANISAKISCHECK, a line of products specifically designed to minimise the possibility of anisakis reaching the consumer.

Thus, for each specific case, depending on the type of raw material to be inspected, the work requirements and location (fish market, processing company, fishmonger, supermarkets, restaurants, etc.) Marexi offers a specific solution adapted to your needs.

The ScanisakiS UVPress[®] is a system developed entirely by MAREXI for the detection of Anisakis parasites in fish samples. It is an equipment specifically designed for use in the food industry and analysis laboratories.

Its development has followed the precepts of the standard 'ISO/DIS 23036 - Microbiology of the food chain -Methods for the detection of Anisakidae L3 larvae in fish and fishery products'.

Thanks to its Optical Sensor and its Artificial Intelligence based Vision Software, the ScanisakiS UVPress[®] allows to automate the process of detection and counting of Anisakis in fish samples subjected to UV-A radiation under controlled conditions.

ScanisakiS UVPress[®] is compatible with any PC running Windows 10 64bits operating system, and thanks to its database management module, it allows you to store relevant information and generate complete reports in different formats (Excel, Word, Pdf...etc.).

The complete ScanisakiS UVPress® system consists of the following components:

- UV cabinet for inspection of fish samples.
Includes manual viewer.
- Optical sensor with cab mounting accessory.
USB 3.0 cable for PC connection.
- ScanisakiS UVPress® software package + user licence.
- Hydraulic press for sample processing (optional).

Some application areas of the ScanisakiS UVPress® :

- Laboratories: Public Health for Food Safety analysis.
- Research centres: Standardisation of parasitological studies.
- Suppliers, intermediaries and traders in the food chain.
- Control tool for Production Quality and technical basis for supplier and customer relations.

Marexi Marine Technology

*Once again Marexi innovates
at the service of the food industry*

Company founded in Vigo in 2004.
Marexi researches in Projects and develops and commercialises products
which are protected by international patents.

*Technological solutions for fisheries,
aquaculture, food and environment.*
